(1) **Fieldbus interface**
Communication interface between fieldbus and gateway: interfaces for standardized fieldbus systems in industrial automation.
BACnet/IP Gateway: interface for a BACnet fieldbus.
OPC UA server: interface for the OPC UA communication

(2) **Number of ASi networks, number of ASi Master**
"Double Master": 2 ASi networks, 2 ASi Masters.

(3) **Integrated decoupling, ASi current measurement in the gateway**
"no, max. 8 A/ASi network, redundant supply": 1 power supply per ASi network. Gateway is powered in normal operation from one of the two ASi power supplies. Should one ASi power supply fail, switching to the other ASi power supply allows all the diagnostics functions to be maintained and the unaffected ASi network continues to operate.

(4) **Diagnostic and configuration interface**
"Ethernet fieldbus + Ethernet diagnostic": Access to ASi Master and Safety Monitor with Bihl+Wiedemann software by using the Ethernet diagnostic interface or Ethernet fieldbus interface.

The latest version of the device description file of the gateway is available in the "Downloads" section of the respective device.

(5) **Recognition of duplicate ASi addresses**
Detects whether the same address has been assigned to two ASi slaves. Frequent error when using a hand held addressing device.

(6) **ASi fault detector**
Checks the ASi line for interference effects such as noise, external voltages, etc.

(7) **Programming in C**
Using a C-program offers the possibility to run mini-PLC functions with a gateway.
